DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-18 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1, 3, 10, 12, 15, 18, line 5, "the emi shield member does not include sidewalls along a perimeter of the emi shield member" is not discussed in the specification. Any negative limitation or exclusionary proviso must have basis in the original disclosure See Ex parte Grasselli, 231 USPQ 393 (Bd. App. 1983)(MPEP 2173.05(i)). This limitation is not considered over the prior art in addressing the claims.

Claims 2, 4-9, 11, 13, 14, 16, 17 are included because of their dependencies.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Art Unit: 2831

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 3, 6, 10-18 are rejected under 35 U.S.C. 102(e) as being anticipated by Chen et al.

Chen et al discloses a printed circuit board (120, 140) having at least one protuberance (ground connection pin 130), a shield member (110) made of metal (col 3, line 16) having a substantially flat shape, an aperture (112).

Claims 1, 3, 4, 6-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Bianca et al.

Bianca et al discloses a printed circuit board (26) having at least one protuberance (10), a shield member (38) having a substantially flat shape, an aperture (24).

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 2, 4, 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chen et al

The teaching of Chen et al as discussed above does not disclose the protuberance having a spherical side surface, cross sections gradually reducing in area toward the vertex, or a circular It would have been obvious to one of ordinary skill in the art at the time the invention cone. was made to modify the protuberance of Chen et al by employing the spherical side surface, the cross sections gradually reducing in area toward the vertex, or the circular cone, since more than a mere change of form is necessary for patentability. In re Span-Deck Inc. v. Fab-Con, Inc. (CA 8, 1982) 215 USPQ 835.

Response to Arguments

Applicant's arguments filed 06-23-03 have been fully considered but they are not persuasive.

Applicant argues (1) that Bianca et al and Chen et al do not disclose an emi shielding system that includes an EMI shield member that has a substantially flat shape and that does not include sidewalls along its own perimeter. The examiner disagrees. With respect to (1) the shield members of Bianca and Chen et al are flat shaped and the limitation "an EMI shield member does not include sidewalls along its own perimeter" has been addressed in previous paragraphs.

Communication

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hung V. Ngo whose telephone number is (703) 308-7614. The examiner can normally be reached on Monday to Friday from 9:30 am to 06:00 pm.

Art Unit: 2831

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dean Reichard, can be reached on (703) 308-3682.

The fax phone number for this Group is (703) 872-9318 (Before Final) or (703) 872-9319 (After Final).

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 308-0956.
